

# Making flowers and bushy plants

## Step 1

Paint the tips of your grass tufts with PVA glue, no need to thin it down. I prefer to use a flat brush.

## Step 2

Get some coloured sand (eBay) and level it out in a tray.

Place your glue tipped grass upside down in the tray and lightly press down to make the sand stick to the tips. You can press harder for a fuller coverage.

Gently shake off any excess sand and you are done.

You can also repeat the same process to make leafy plants.

Below I have used [Noch leaves](#) for the first example.

For the second example I have used Fine Grade Sponge Scatter available from [www.themodeltreeshop.co.uk](http://www.themodeltreeshop.co.uk)

Below I have simply scattered over some red sand onto the above while the glue was still wet.
