

Power adapters

My [suppliers links](#) page has recommended eBay listings where you can directly buy the correct type of adapter for some countries

I recommend purchasing a power adapter that has a variety of sized connectors with a polarity switch.

Most bargain stores will have universal adaptors for sale wherever you are in the world, they should work without any problems with the Flockbox.

When searching the Internet for an adapter use these keywords:
Universal DC Power Adaptor

Adapter specs checklist

1. Must be AC/DC
2. Must have a 9 volt option
3. Must have a 2.1mm connector plug, (this is the most common size used)
3. Best to have a polarity option
4. Best to be under 1000ma

A standard universal power adapter will normally have all of the above

For the more technical people, the Flockbox 'tip' aka 'pin' is positive.

See below for examples of the types of universal adapters I recommend as they cover all options

They have a choice of sockets and a polarity switch either on the main body or as reversible pin connectors

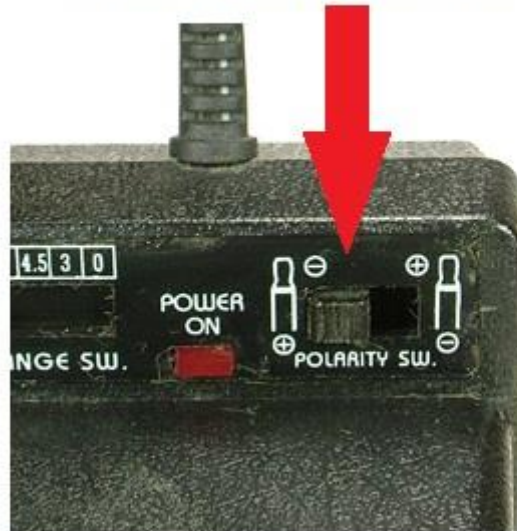

**Your adapter must have DC as the second set of two letters
If it shows AC/AC it is not suitable**

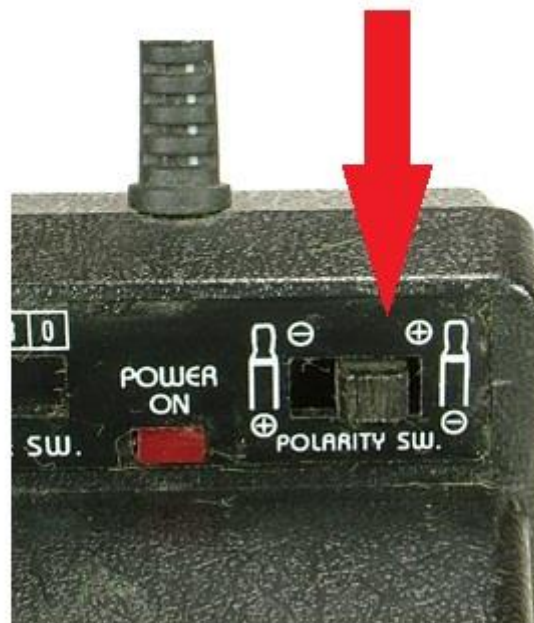

Some adapters have a 'polarity switch'

Try both polarity settings to find which one gives the best performance

This is a polarity switch, it is not on all adapters

If your adapter does not work then try the polarity switch in the opposite setting

Other types of polarity switch may be anywhere along the cable as a pull out plug like below

Some adapters have the polarity switch somewhere along the cable, this one is next to the power plug

You may need to unplug it and plug it in the opposite way round
